Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

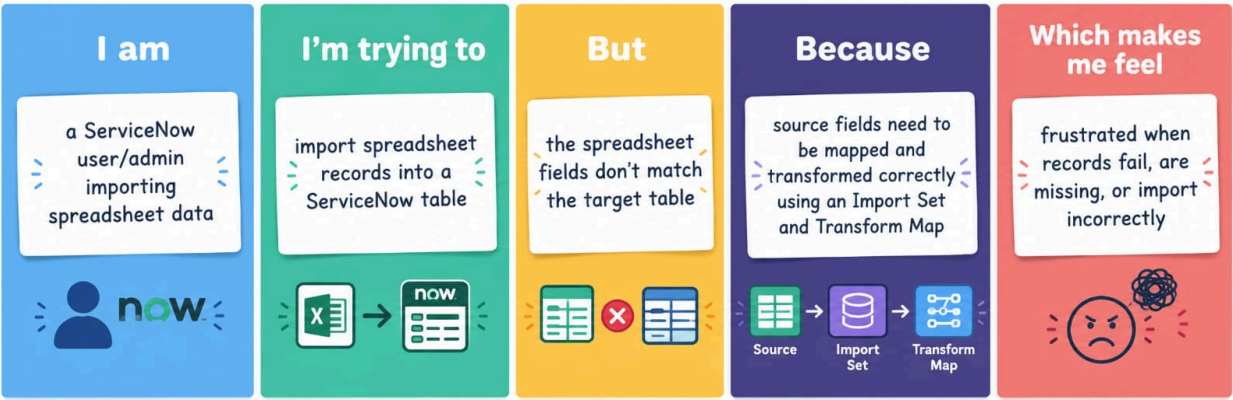

Customer Problem Statement:

Customers and organizations often need to import large amounts of data from spreadsheets into ServiceNow. Manually entering each record is time-consuming, repetitive, and can lead to data entry errors. Customers need a simple and efficient way to transfer spreadsheet data into the ServiceNow system while ensuring that the data is correctly mapped to the required fields.

The Import Data using Transform Map process helps customers import spreadsheet data and automatically transform it into the appropriate ServiceNow table and fields. This reduces manual work, improves data accuracy, and makes the data-import process faster and more reliable.

Import Data using Transform Map (Spreadsheet)	
I am	A ServiceNow developer/admin importing spreadsheet data into a ServiceNow table
I'm trying to	Import spreadsheet records accurately using an Import Set and Transform Map
but	The spreadsheet columns and values may not match the target table fields
because	Source fields need to be mapped and transformed to the correct target fields
which makes	Incorrect mappings can cause import errors, missing data, or incorrect records
so that	The spreadsheet data is loaded into the ServiceNow table correctly and efficiently

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1					
PS-2
