

Functional & Performance Testing Template

Model Performance Test

Date	30 September 2026
Team ID	SWTID-2026-5734
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Spreadsheet File Validation	Prepare a valid spreadsheet with the required columns and upload it for import.	The spreadsheet is accepted and the required columns are recognized.	The valid spreadsheet was accepted and the required columns were recognized.	Pass
FT-02	Field Mapping Validation	Create a Transform Map and map spreadsheet columns to the corresponding target table fields.	Each source column is mapped to the correct target field without mapping errors.	All required spreadsheet columns were mapped to the correct target fields.	Pass
FT-03	Data Import using Transform Map	Run the import process after uploading the spreadsheet and applying the Transform Map.	Valid spreadsheet records are transformed and inserted into the target table.	The spreadsheet records were transformed and imported successfully into the target table.	Pass
FT-04	Invalid / Missing Data Handling	Import a spreadsheet containing invalid or missing values in mapped fields.	Invalid records are identified or rejected according to the field validation rules, without affecting valid records.	Invalid or missing values were identified during transformation, while valid records were processed.	Pass

PT-01	Import Response Time Test	Upload a spreadsheet with a normal number of records and measure the time taken for transformation and import.	The Transform Map processes the spreadsheet within an acceptable response time without timeout.	The spreadsheet was processed within an acceptable response time without timeout.	Pass
PT-02	Bulk Spreadsheet Import Test	Import a spreadsheet containing a larger number of records and monitor the import process.	Bulk records are processed successfully without system slowdown or failure.	The larger spreadsheet was processed successfully without system failure.	Pass
PT-03	Duplicate Record Handling	Import spreadsheet data containing duplicate records and run the Transform Map.	Duplicate records are handled according to the configured coalesce or validation rules.	Duplicate records were handled according to the configured Transform Map rules.	Pass
